This is an existing building that resides on the historical register. The scope of work for this project was focused on maintenance and re-support of existing structural items that have broken down over time. Diamond Construction, Inc. painted the exterior of this entire building to match the existing historical façade. Additionally, there were some large windows that were in need of replacement. This work included removal and re-use of the existing historical casework. This project also included some re-support at some flooring areas that were failing structurally. Diamond Construction, Inc. provided the investigations as well as the re-support construction work.
